

YAHOO!

Hi,

We noticed that you access your Yahoo Mail from a non-Yahoo email application, which may be using a less secure sign in. This may make your Yahoo account more vulnerable to compromise.

We strongly recommend that you improve the security of your account, by taking the steps below.

1. On a mobile device, upgrade to the Yahoo Mail app for Android or iOS:

<https://overview.mail.yahoo.com/app>

2. On desktop, use Yahoo Mail via:

<https://mail.yahoo.com>

3. Turn off access for apps with less secure sign in, using the link below:

<https://login.yahoo.com/account/security#other-apps>

For more information about these changes and more secure options for accessing Yahoo Mail, visit our help page:

<https://help.yahoo.com/kb/SLN27791.html>

If you've already taken action on this, you can disregard this email.

Thanks for being a loyal Yahoo Mail user.

Sincerely,
Yahoo

Protect yourself from phishing emails

We will never ask you for your password in an email. If you don't trust a link in an email, go directly to the normal login page.
